Top 50 edge labels × category groups
label
pathway
Cytokine Signaling in Immune system
Axon guidance
Formation of the dystrophin-glycoprotein complex (DGC)
Diseases of signal transduction by growth factor receptors and second messengers
Adaptive Immune System
RHO GTPase Effectors
Metabolism
Metabolism of proteins
Late endosomal microautophagy
Signaling by TGF-beta Receptor Complex
Autophagy
Integrin cell surface interactions
VEGFR2 mediated vascular permeability
GABA receptor activation
Signaling by GPCR
Disease
GPCR ligand binding
Protein-protein interactions at synapses
Signaling by NTRKs
integrin, alpha V
Non-integrin membrane-ECM interactions
Death Receptor Signaling
Activation of NMDA receptors and postsynaptic events
low density lipoprotein receptor-related protein 1
Cell-Cell communication
Innate Immune System
Fcgamma receptor (FCGR) dependent phagocytosis
Vesicle-mediated transport
MyD88:MAL(TIRAP) cascade initiated on plasma membrane
GPCR downstream signalling
L1CAM interactions
MAP2K and MAPK activation
Thrombin signalling through proteinase activated receptors (PARs)
Signaling by RAF1 mutants
Signaling by Receptor Tyrosine Kinases
Signaling by BMP
Regulation of T cell activation by CD28 family
Initial triggering of complement
MAPK1/MAPK3 signaling
ligand_receptor
MHC class II antigen presentation
Regulation of Homotypic Cell-Cell Adhesion
Signaling by the B Cell Receptor (BCR)
Toll Like Receptor 4 (TLR4) Cascade
integrin, beta 1 (fibronectin receptor, beta polypeptide, antigen CD29 includes MDF2, MSK12)
GRB2:SOS provides linkage to MAPK signaling for Integrins
Clathrin-mediated endocytosis
Developmental Biology
Infectious disease
immune
